Skin contact: Take off contaminated clothing and shoes immediately. After contact with skin, wash immediately with plenty of soap and water for at least 15 minutes. Seek medical attention.

Ingestion: Do not induce vomiting without medical advice. Call a physician or Poison Control Centre immediately. Never give anything by mouth to an unconscious person. If vomiting occurs spontaneously, minimize the risk of aspiration by properly positioning the affected person.

Inhalation: Move to fresh air in case of accidental inhalation of vapors. Call a physician or Poison Control Centre immediately. If breathing has stopped or heart has stopped, trained personnel should immediately administer artificial respiration or CPR, as required.

Precautions: Keep away from open flames, hot surfaces and sources of ignition. Avoid contact with eyes. Do not get on skin or clothing. Wash thoroughly after handling. Do not breathe vapors or spray mist.

Safe handling advice: Keep airborne concentrations below exposure limits. Wear suitable protective equipment.

Technical measures/storage conditions: Keep away from heat, sparks, and flame. Store out of direct sunlight in well ventilated area. Keep container closed when not in use. Use with adequate ventilation.

Packaging requirements: Steel or high density polyethylene (HDPE) container approved for flammables. To avoid ignition of vapors by static electricity discharge, all metal parts of the equipment must be grounded.

Incompatible products: Oxidizing agents.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Engineering measures to reduce exposure: Control the source. Enclosure of the process. Other suitable methods.

Hygiene measures: Keep airborne concentrations below exposure limits. Avoid contact with skin, eyes and clothing. Do not breathe vapors or spray mist. Wear suitable protective equipment.

<td>Methanol</td>
<td>Causes eye irritation. Toxic by ingestion and inhalation. Danger of very serious irreversible effects if swallowed. Can be aspirated into lungs during ingestion or vomiting. Aspiration can cause potentially fatal injury to the lungs. Chronic inhalation has shown to cause diminished vision. Acute oral and dermal exposure has shown to cause optic nerve effects, diminished vision and brain effects (necrosis and hemorrhaging). At first, symptoms of severe exposure are nausea, headache, vomiting, dizziness. The latent period is followed by development of metabolic acidosis and severe visual effects. Coma and death are usually due to respiratory failure. Fetotoxic and teratogenic effects observed in controlled animal studies.</td>
